

WibuKey 6.00a**Release Date**

2009-Dec-07

Operating Systems

Windows, Mac OS X, Linux

Bugfixes

FB6851: A Remote Update file (.rtu) could not be imported.

FB6974: In the case the server search list had an entry, on 64-bit Windows systems an application could crash.

FB6659: The WibuKey Control Panel crashed on specifying an empty file name when creating a context file.

FB7036: The WebMonitor (Mac, Linux) displayed mix-uped IP addresses.

WibuKey 6.00**Release Date**

2009-Nov-06

Operating Systems

Windows, Mac OS X, Linux

New Features

FB5490: Windows: With the WkRuntime.exe there exist an additional combined installation package which holds the runtime components for 32-bit and 64-bit Windows.

FB6320: Windows: The WibuKey Server Manager now is multi-lingual. Currently, a German and Chinese localization is available.

FB5814: Mac OS X, Linux : The WibuKey Network Server now is multi-lingual.

FB4242: Mac OS X: The installer now can also be used for Snow Leopard (OS X 10.6).

FB5537: Linux: The WibuKey components no longer depend on the libstdc++ . The 64-bit installer now include the installation of the 32-bit components. They are then located at /usr/lib32.

FB6163: Linux: Under 64-bit the RPM Installer now contain the links for the installed libraries from/to /usr/lib or /usr/lib64. This features higher compatibility especially on dynamic loading of the libraries.

Bugfixes

FB1598: On creating a rtc file of a WibuBox with Extended Memory involving large data volumes errors occurred.

FB1899: The stability of the WibuKey Servers has been improved in the case of repeating rescan an replug events.

FB1925: Windows: At times it happened that entries in the WkLAN server search list were not considered in the search.

FB1762: Windows: When the Limit Counter was changed in WkList32, and by accident the button "Apply" was clicked twice in quick succession, an error message displayed.

FB6114: Windows: On starting and stopping the server using the WibuKey Server Manager the user account management window under Windows Vista and Windows 7 opened minimized.

FB6310: Windows: The WibuKey uninstalling program deleted the ShellExtension of CodeMeter.

FB6327: Windows: Opening the WibuKey Network Monitor or the WibuKey Settings in the system control under Windows Vista and Windows 7 at times failed due to privilege problems.

FB2025: Windows: In WibuKey Server Manager the logging status is displayed even in the case that the server does not run..

FB122: Windows: The WibuKey Runtime Setup is executed only when no newer version has been installed on the system.

FB6620: Windows: The status window of the WibuKey Server Managers under Windows Vista and Windows 7 now displays larger and thus displays more events.

FB6456: Windows: The WibuKey Server Manager can only be one-time started for each user.

FB2178: Windows: During the WibuKey Runtime Setup the operating systems Windows Server 2003, Windows Server 2008 and Windows 7 were not properly displayed.

FB5567: Windows: All defined settings from the WibuKey.ini file set by the WibuKey Runtime Installation program are now transferred into the HKLM-WibuKey branch. This makes them at first available for all users of the operating system.

FB4865: Windows: A conflict referring to the *.rtc file extension using Windows Live Meeting has been fixed.

FB1508, FB6324: Windows: The installation of the signed drivers under Windows Vista and Windows 7 is now able using the installation programs.

FB6121: Windows: The WibuKey system control could not create a report under 64-bit systems.

FB2015: Windows: The WibuKey Server Manager installs the WibuKey Server by start type "automatic".

FB2090, FB6615: Windows: The report function now lists all relevant files.

FB5584: Windows: The uninstalling of the Runtime Installers was not executed in the system language specified.

FB1729: Windows: On using the IP binding in WibuKey Server Monitor now the correct IP address is displayed.

FB1877: Windows: When the WibuKey Runtime installation was aborted, the status was not correctly rewritten into the registry.

FB5779, FB5914, FB5915: Mac OS X: In the case on OS X 10.6 the WibuKey Server was started but no network existed, on starting and stop the server needed considerable long time. Moreover, the PC name was handled as incorrect IPv6 address.

FB5949: Mac OS X: For Mac OS X 10.4 even in this installer support for CFM9/Classic applications is included. This requires a partition with Classic environment and a PPC processor. Only the subsystem WkLAN is supported.

FB5705: Mac OS X: Problems on starting of WkConfig were fixed.

FB5716: Mac OS X: The WkMacXLib Framework now no longer refers to the Carbon Framework.

FB1534: Mac OS X, Linux: The search for servers in the network using the server search list now also works in the case that the PCs to be searched for are not part of the same subnet, or are not addressable via UDP.

FB5925: Mac OS X, Linux: On specifying invalid values in WkConfig the error messages have been improved.

FB3520: Linux: When WkConfig is started but Java VM is used instead of gcj, now message dialog is displayed suggesting that the use of Sun Java is required.

FB2401: Linux: Under 64-bit after 163334 cyclical license requests, no additional license could be allocated although it existed.
